

Pensions

PENSIONS

The application 'Pensions' (including retirement, incapacity, and survivor allowances), ensures the management of the pensions or allowances files from the moment they are delivered by the insurants or the beneficiaries until they are cleared and closed, this step being taken up by the application "Benefits Payments".

It is based essentially on the data processed in the application 'Registration' as far as insurants and employers identification is concerned and on the data processed in the application 'Contributions' in order to have access to the quarters that have been reported and the wages filled out by the employers in the insurant individual form, and that will be used to calculate the pensions and allowances to be granted.

This application is based on relevant parameters and settings defined in the application SSIS-RF which contains the following functions for users to:

- Handle the Pensions files,
- Handle the beneficiaries of Pensions and carry out the changes of their status,
- Do the follow-up of files or workflow,
- Send reminders and notifications to the beneficiaries of incapacity or early retirement pensions
- Settle the pensions,
- Validate or print the decisions made regarding the demands.

Main features are:

- The traceability of occurrences in the module « follow-up »,
- The consistency of beneficiaries data stocked in the family cluster,
- The clarity in settlement rules,
- The distinction between process of automatic settlement and process of adjustments taking maximum precautions and safety when running the process.
